

# Logic/GarageBand Setup and Functional Overview

The Pacer Logic and GarageBand integration has been verified with Logic 8, 9, X as well as GarageBand 10 and higher. These instructions assumes you have a compatible Logic or GarageBand program installed running on Mac OS X 10.7 or higher. The instructions apply equally to Logic and GarageBand.

## Installation

- Complete the Pacer firmware update available in a separate download under your product registration.
- Locate the Pacer\_Apple\_support installer included with the downloaded package and run it.
- Plug-in your Pacer and make sure it's switched on.
- Launch Logic and create a new project with at least one track.
- In Logic, the Control Surface Setup window will appear to indicate that Logic has detected a new control surface. You can close this window. In GarageBand this does not happen.

That's it, setup is now complete and you can move on to the fun part, learning how it all works

## Functional Overview

| TRACK   |                         | TRANSPORT                                                                           |                                  |                                                                                       |                              |
|---------|-------------------------|-------------------------------------------------------------------------------------|----------------------------------|---------------------------------------------------------------------------------------|------------------------------|
| 1-6     | PARAMETER               | 1-6                                                                                 | PARAMETER                        | Preset, A-D.                                                                          | PARAMETER                    |
| Solo    | Track Solo on/off.      |  | Cycle on/off                     | Preset                                                                                | Select current Pacer preset. |
| Mute    | Track Mute on/off.      |  | Rewind, 1 bar. Press to scroll.  | Track                                                                                 | Select DAW Track preset.     |
| Rec Arm | Record Arm on/off.      |  | Forward, 1 bar. Press to scroll. | Transport                                                                             | Select DAW Transport preset. |
| Click   | Click on/off.           |  | Stop. Returns to starting point. |  | Next DAW Track.              |
| Patch v | Next plugin patch.*     |  | Play. Press again to pause.      |  | Previous DAW Track.          |
| Patch ^ | Previous plugin patch.* |  | Activates toggle record.         |                                                                                       |                              |

\*Selects patches in Logics Library browser when it's open or plugin patches when a plugin is in focus.

Pressing and holding the Transport switch assigns switches 1-6 to long press functions as per the below chart.

| LONG PRESS TRANSPORT |                    |                                                                                     |                              |
|----------------------|--------------------|-------------------------------------------------------------------------------------|------------------------------|
| 1-6                  | PARAMETER          | Preset, A-D.                                                                        | PARAMETER                    |
| 1                    | Goto L.            | Preset                                                                              | Select current Pacer preset. |
| 2                    | Move Loop Back.    | Track                                                                               | Select DAW Track preset.     |
| 3                    | Move Loop Forward. | Transport                                                                           | Select DAW Transport preset. |
| 4                    | Undo.              |  | Next DAW Track.              |
| 5                    | Count-In on/off.   |  | Previous DAW Track.          |
| 6                    | Replace on/off.    |                                                                                     |                              |
